Оглавление

Задача	2
Этап 1. Математическая модель	4
Этап 2. Решение с помощью MS Excel	5
Этап 3. Приложение-интерфейс к задаче	6
Приложения	6
Список литературы	6
Кол	6

Задача

Задача 4. Компания «Корвет»

Компания «Корвет» производит программное обеспечение на CD-ROM, которое продается в пакете с драйверами CD-ROM основными производителями компьютерного оборудования. Она оценивает возможность развития 6 новых программных приложений. В таблице представлена информация о затратах и ожидаемой чистой приведенной прибыли от продажи приложения:

Приложение	Ожидаемые траты на развитие, \$	Требуемое число программистов	Ожидаемая чистая приведенная прибыль, \$
1	400 000	6	2 000 000
2	1 100 000	18	3 600 000
3	940 000	20	4 000 000
4	760 000	16	3 000 000
5	1 260 000	28	4 400 000
6	1 800 000	34	6 200 000

У «Корвета» 60 программистов. Фирма может выделить 3,5 млн долларов на развитие новых программных приложений.

Каков оптимальный набор приложений, которые следует развивать, если:

- а) ожидается, что клиенты, заинтересованные в приложении 4, будут заинтересованы и в приложении 5, и наоборот. Таким образом, если одно из приложений решено развивать, другое тоже должно быть развито.
- b) Приобретение приложения 2 имеет смысл, только если в пакет включено приложение 1. Таким образом, приложения 1 и 2 тоже должны быть развиты вместе.

- с) Приложения 3 и 6 эксплуатируют одну и ту же тему. Следовательно, если одно из них развивается, то другое определённо нет.
- d) Стремясь обеспечить качество продукции, «Корвет» не склонен развивать более 3 программных продуктов.

Этап 1. Математическая модель

Приложение	Ожидаемые траты	Требуемое число	Ожидаемая чистая
	на развитие, млн \$	программистов	приведенная прибыль,
			млн \$
1	0,40	6	2,00
2	1,10	18	3,60
3	0,94	20	4,00
4	0,76	16	3,00
5	1,26	28	4,40
6	1,80	34	6,20

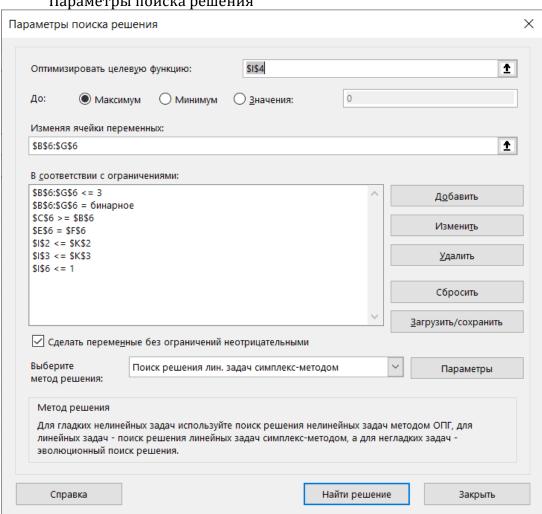

$$x_i = egin{cases} 0, i \ \text{приложение не разрабатывается} \ 1, i \ \text{приложение разрабатывается} \ egin{cases} 6x_1 + 18x_2 + 20x_3 + 16x_4 + 28x_5 + 34x_6 \leq 60 \ 0,4x_1 + 1,1x_2 + 0,94x_3 + 0,76x_4 + 1,26x_5 + 1,80x_6 \leq 3,5 \ x_4 = x_5 \ x_2 \geq x_1 \ \sum x_i \leq 3 \ x_3 + x_6 \leq 1 \end{cases}$$
 $x_i - bin$ $z = \max{(2x_1 + 3,6x_2 + 4x_3 + 3x_4 + 4,4x_5 + 6,2x_6)}$

Этап 2. Решение с помощью MS Excel

Таблица описывающая затраты и доход разработки ПО.

	Α	В	С	D	E	F	G	Н	1	J	K
1									Сумма		Ограничение
2	Программисты, шт	6	18	20	16	28	34		58	<=	60
3	Траты на разработку, млн \$	0,4	1,1	0,94	0,76	1,26	1,8		3,3	<=	3,5
4	Ожидаемый доход, млн \$	2	3,6	4	3	4,4	6,2		11,8		
5											
6	Разрабатывается?	1	1	0	0	0	1		1		
7		x1	x2	x 3	x4	x5	х6		x3+x6		
8											
9											
10											
11											
12											
13											

Параметры поиска решения

Этап 3. Приложение-интерфейс к задаче

Интерфейс приложения

Nº	Программисты	Траты на разработку	Ожидаемый доход	
1	6	0.4	2.01	
2	18	1.1	3.6	
3	20	0.94	4.0	
4	16	0.76	3.0	
5	28	1.26	4.4	
6	34	1.8	6.2
